

Behringer WAVE Firmware

Version 1.0.11 (15 April 2025)

Improvements:

1. Enhanced Envelope Shapes

You can now choose between linear and exponential envelope curves. This setting is available in the FIRM menu:

- FIRM: 0 – Original (default)
- FIRM: 1 – Enhanced with Linear Envelopes
- FIRM: 2 – Enhanced Exponential Envelopes

2. Extended Transient Playback Length

The UW setting now allows for greater flexibility when selecting transient playback lengths. New sample length options include:

- UW: 0 – 128 samples
- UW: 1 – 2048 samples

UW: 2 – 8192 samples

3. Added new factory transients: 44, 45, 46, 47, and 48 (update required via Synthtribe).
4. Updated presets in Bank 0: 70, 71, 72, 73, and 74.
5. Minor bugs fixed

IMPORTANT:

Be sure to reset your WAVE to factory settings with DTF:8 after updating. You also need to use the "Factory wavetable transient reset" function in the Synthtribe app to update the transients.
