

Behringer X-LIVE Firmware

Version I19 (06 May 2025)

Firmware version I19 fixes issues with MIDI transmission on X-LIVE card revisions REV-I and REV-J. This update is not compatible with previous revisions: REV-A through REV-G and REV-07.

You can find the revision of your X-LIVE card printed directly on the circuit board:

To update the firmware:

1. Download the X-LIVE firmware update file from [behringer.com](https://www.behringer.com) and save it on the root directory of a USB flash drive (FAT32).
2. Plug the USB flash drive into the console while it is powered off.
3. Hold down the VIEW button in the USB DATA/AUDIO section and turn on the console.
4. The updater will search the USB root and install the X-LIVE expansion card firmware automatically.
5. Wait for the update process to be completed. This may take up to 5 minutes. A message will be displayed on screen after the expansion card is successfully updated.
6. Turn off the console and turn it back on to restore normal operation.

NOTE: Make sure that only expansion card firmware files are in the USB root directory before booting the console in update mode. Console firmware files must be either copied at a later point onto the USB flash drive or moved to a subfolder and accessed through the **SETUP > GLOBAL > UPDATE FIRMWARE** menu.
