Direct Lake Messaging v3.4 (2015-06)

Overall

IMPORTANT INFORMATION!

- Make sure to use the lasted available firmware in your products to assure full compability with the Direct Lake Messaging protocol (compability information is stated per command in the protocol documentation).
- All applications and tools supplied within this package are provided “as is”. They should only be used for educational and experimentation purposes. Do not use in production or for live purposes

Headlines - what’s new?

- Added Information about how to use “Dynamic Port” with Lake Direct Messaging. This allows a sending device (e.g. a computer) to use unique ports for every Lake frame it communicates to.
- ParaDLM is now part of the package.

Contents in this package

Protocol Documentation v3.4

Document describing the protocol structure and all available commands.

DLMTestLite v2.0.0

Simple command line application allowing manual entry of a single command as text. The application packages the command string into a message and dispatches it.

ParaDLM v1.2.0

More advanced command line application. This application can automatically discover Lake frames on the network and send a command string to all online frames. This application also has the option to use dynamic ports and send messages in parallel.
